

## Are you tired of the excessive costs incurred from manual regression testing of frequent software patches?

Automating your testing can increase the depth and scope of tests to help improve software quality, therefore eliminating the resource intensive, expensive and inconsistent results that occur from manual testing after each BMC patch, hotfix, minor release or upgrade that is implemented throughout the year.

Partner IT introduces **Test IT**, a full service automated testing solution for your BMC Remedy implementation. With plans starting as low as \$20K/year, **Test IT** comes with automated scripts to cover BMC Remedy ITSM, Smart IT, Digital Workplace (formerly MyIT), and BMC Remedy customizations.

**Test IT** is available both as a hosted or on-premise solution. Included in our services, our experienced script team writes all the automated test scripts for you based on your requirements, on an ongoing basis throughout the year. Therefore, no additional training is required for your staff.

Request a Demo and see how **Test IT's** user friendly, intuitive and super simple interface can benefit your organization.

- *Zero Learning Curve*
- *300+ Customized Scripts and Robust Dashboards*
- *Compatible with ITSM, Smart IT, Digital Workplace, and Smart Reporting*
- *Scheduled & Unattended Testing Automation*
- *Distributed Test Execution*
